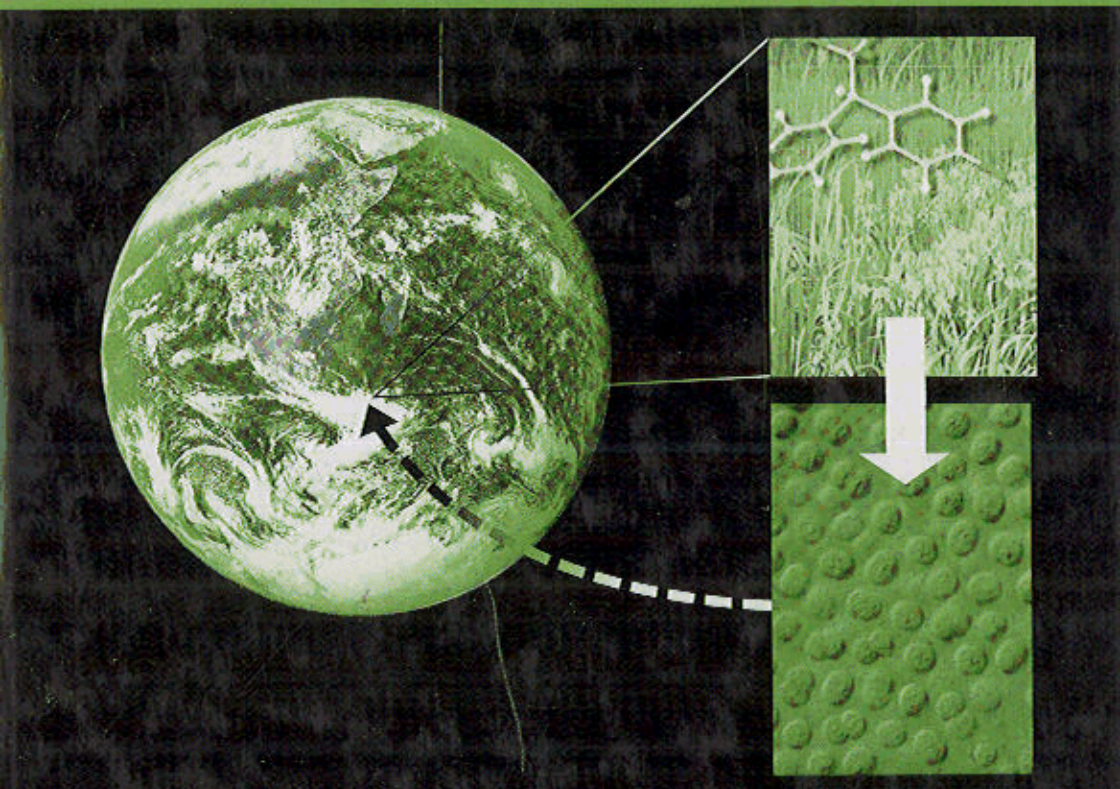
Environmental Science and Technology: A Wiley-Interscience Series of Texts and Monographs
Jerald L. Schnoor and Alexander Zehnder, Series Editors

Bioremediation and Natural Attenuation

Process Fundamentals and Mathematical Models



Pedro J. J. Alvarez Walter A. Illman

CONTENTS

Preface ix

1. Introduction to Bioremediation 1

2. Geochemical Attenuation Mechanisms 25

3. Biodegradation Principles 49

4. Fundamentals of Groundwater Flow and Contaminant Transport Processes 115

5. Fate and Transport Equations and Analytical Models for Natural Attenuation 169

6. Numerical Modeling of Contaminant Transport, Transformation, and Degradation Processes 201

7. Field and Laboratory Methods to Determine Parameters for Modeling Contaminant Fate and Transport in Groundwater 283

8. Bioremediation Technologies 351

9. Performance Assessment and Demonstration of Bioremediation and Natural Attenuation 457

Appendix A. Chemical Properties of Various Organic Compounds 527

Appendix B. Free Energy and Thermodynamic Feasibility of Chemical and Biochemical Reactions 535

Appendix C. Commonly Used Numerical Groundwater Flow and Solute Transport Codes 543

Appendix D. Nonparametric Statistical Tests for Determining the Effectiveness of Natural Attenuation 551

Appendix E. Critical Values of the Student *t*-Distribution 557

Glossary 559

Index 577
