Contents

Part I

Ceramics as Engineering Materials	1
---	---

Chapter 1

What Is a Ceramic?	3
1.1 Definitions of Ceramics	3
1.2 Material Types Generally Considered in the Ceramics Family	3
1.2.1 Polycrystalline Ceramics Fabricated by Sintering	3
1.2.2 Glass	4
1.2.3 Glass Ceramics	4
1.2.4 Single Crystals of Ceramic Compositions	4
1.2.5 Chemical Synthesis or Bonding	5
1.2.6 Natural Ceramics	5
1.3 So What Is a Ceramic?	5
References	6
Study Guide	6

Chapter 2

History of Ceramics	7
2.1 Ceramics in the Stone Age	7
2.1.1 Use of Natural Ceramics	7
2.1.2 Synthetic Stone: Clay Transformed by Fire	9
2.1.3 First Practical Use of Earthenware	9
2.1.4 Other Neolithic Ceramic Innovations	10
2.2 The Rise of Traditional Ceramic Industries	12
2.2.1 Ceramic Innovations during the Chalcolithic Period	12
2.2.2 Ceramics and the Metals Ages	13
2.2.3 The Emergence of Glass	13
2.2.4 Ceramics in Building	15
2.2.5 Ceramic Whitewares	17
2.3 From Traditional to Modern Ceramics	18
2.4 Summary	19
References	19
Study Guide	20

Chapter 3

Applications: Engineering with Ceramics	21
3.1 High-Temperature Applications	22
3.1.1 Ceramics in Metals Processing	22
3.1.2 Glass Production	25
3.1.3 Industrial Processes	25
3.1.4 Heat Engines	29
3.2 Wear and Corrosion Resistance Applications	36
3.2.1 Seals	36
3.2.2 Valves	39

3.2.3	Pumps	42
3.2.4	Bearings	42
3.2.5	Thread Guides	44
3.2.6	Ceramics in Papermaking	44
3.3	Cutting and Grinding	45
3.3.1	Ceramic Cutting Tool Inserts	46
3.3.2	Superhard Abrasives	49
3.3.3	Waterjet Cutting	50
3.4	Electrical Applications of Ceramics	50
3.4.1	Ceramic Electrical Insulators	51
3.4.2	Dielectric Ceramics	54
3.4.3	Semiconductors	55
3.4.4	Electrical Conductors	57
3.4.5	Ceramic Superconductors	59
3.5	Magnetic Ceramics	61
3.6	Optical Applications of Ceramics	61
3.6.1	Applications Based on Transparency	62
3.6.2	Applications Based on Phosphorescence and Fluorescence	66
3.7	Composites	68
3.8	Medical Applications of Ceramics	69
3.8.1	Replacement and Repair	69
3.8.2	Ceramics for Medical Diagnosis	73
3.8.3	Ceramics in Medical Treatment and Therapy	76
3.9	Energy Efficiency and Pollution Control	78
3.9.1	Energy Savings in the Home	78
3.9.2	Ceramics for Power Generation	81
3.9.3	Ceramics in the Transportation Sector	82
3.9.4	Other Uses of Ceramics for Energy Efficiency and Pollution Control	84
3.10	Military	84
3.11	Recreation	85
3.12	Summary	87
	References	87
	Study Guide	88

Part II

Structure and Properties	91
--------------------------------	----

Chapter 4

Atomic Bonding and Crystal Structure	93
4.1 Electronic Configuration of Atoms	93
4.2 Bonding	94
4.2.1 Metallic Bonding	96
4.2.2 Ionic Bonding	96
4.2.3 Covalent Bonding	101
4.2.4 Ionic and Covalent Bond Combinations	103
4.2.5 van der Waals Bonds	103
4.3 Polymorphic Forms and Transformations	105
4.4 Noncrystalline Structures	107
4.4.1 Glasses	107
4.4.2 Gels	108
4.4.3 Vapor Deposition	109

4.5	Molecular Structures	109
4.5.1	Hydrocarbons	109
4.5.2	Addition Polymerization	109
4.5.3	Condensation Polymerization	111
4.5.4	Polymer Crystallization	112
4.5.5	Cross-Linking and Branching	112
	References	113
	Problems	113
	Study Guide	114

Chapter 5

	Crystal Chemistry and Specific Crystal Structures	115
5.1	Crystal Structure Notations	115
5.1.1	Crystal Systems and Bravais Lattices	115
5.1.2	Crystal Directions and Planes	115
5.1.3	Structure, Composition, and Coordination Notations	118
5.2	Crystal Chemistry of Ceramics	119
5.2.1	Crystal Chemistry Concepts	119
5.2.2	Crystal Chemical Substitutions	123
5.2.3	Derivative Structures	123
5.3	Metallic and Ceramic Crystal Structures	125
5.3.1	Metallic Crystal Structures	125
5.3.2	Ceramic Structures with a Single Element	126
5.3.3	Binary Ceramic Structures	128
5.3.4	Ternary Ceramic Structures	134
	References	142
	Additional Recommended Reading	142
	Problems	142
	Study Guide	142

Chapter 6

	Phase Equilibria and Phase Equilibrium Diagrams	145
6.1	Phase Equilibrium Diagrams	145
6.1.1	Concept of Phase Equilibria	145
6.1.2	The Phase Rule	146
6.1.3	One-Component Phase Diagrams	146
6.1.4	Two-Component Systems	148
6.1.5	Intermediate Compounds	151
6.1.6	Three-Component Systems	159
6.2	Phase Equilibrium Diagram Composition Calculations	170
6.2.1	Composition Conversions	170
6.2.2	Binary Composition Calculations	172
6.2.3	Ternary Composition Calculations	173
6.3	Isoplethal Crystallization Paths	174
6.3.1	Binary Isoplethal Analysis	174
6.3.2	Ternary System Isoplethal Analysis	176
6.4	Nonequilibrium Behavior	178
6.4.1	Sluggish Kinetics	178
6.4.2	Rapid Heating or Cooling	178
6.4.3	Nucleation Difficulty	179

6.4.4	Elastic Constraint of a Polymorphic Transformation	179
6.4.5	Additional Information on Nonequilibrium	179
References		179
Problems		180
Study Guide		182

Chapter 7

Physical and Thermal Behavior		183
7.1	Physical Properties	183
7.1.1	Density	183
7.1.2	Melting Behavior	189
7.2	Thermal Properties	189
7.2.1	Heat Capacity	189
7.2.2	Thermal Conductivity	192
7.3	Thermal Expansion	198
7.3.1	Factors Influencing Thermal Expansion	200
References		207
Problems		207
Study Guide		209

Chapter 8

Mechanical Behavior and Measurement		211
8.1	Elasticity	211
8.1.1	Modulus of Elasticity	212
8.1.2	Elastic Modulus Measurement	214
8.1.3	Poisson's Ratio	215
8.2	Strength	216
8.2.1	Theoretical Strength	217
8.2.2	Effects of Flaw Size	217
8.2.3	Strength Measurement	221
8.2.4	Strength Data for Ceramic Materials	228
8.3	Fracture Toughness	230
8.4	Ductile Versus Brittle Behavior	231
8.4.1	Mechanism of Plastic Deformation	232
8.4.2	Deformation Behavior of Metals	234
8.4.3	Deformation Behavior in Ceramics	235
8.4.4	Ceramics Deformation Summary	239
References		240
Additional Recommended Reading		241
Problems		241
Study Guide		241

Chapter 9

Time, Temperature, and Environmental Effects on Properties		243
9.1	Creep	243
9.1.1	Effects of Temperature and Stress on Creep	244
9.1.2	Effects of Single-Crystal Structure on Creep	244
9.1.3	Effects of Microstructure of Polycrystalline Ceramics on Creep	246
9.1.4	Creep in Noncrystalline Ceramics	247
9.1.5	Effects of Composition, Stoichiometry, and Environment	248

9.1.6 Measurement of Creep248

9.1.7 Creep Consideration for Component Design252

9.2 Static Fatigue252

9.3 Chemical Effects255

9.3.1 Gas-Solid Reactions255

9.3.2 Liquid-Solid Reactions262

9.3.3 Solid-Solid Reactions269

9.4 Mechanically Induced Effects269

9.4.1 Surface Flaw Formation269

9.4.2 Removal of Surface Material273

9.5 Thermal Shock276

References280

Problems281

Study Guide282

Chapter 10

Electrical Behavior285

10.1 Fundamentals and Definitions285

10.2 Electronic Conductivity286

10.3 Ionic Conductivity288

10.3.1 Mechanisms of Ionic Conductivity.....289

10.3.2 Ceramic Materials Exhibiting Ionic Conductivity292

10.3.3 Applications of Zirconia Oxygen Ion Conductive Ceramics293

10.3.4 Alternate Oxygen Ion Conductors.....299

10.3.5 Sodium Ion Conductors and Applications.....299

10.3.6 Lithium Ion Conduction and Applications302

10.4 Conductive Polymers.....302

10.5 Electrical Insulators304

10.5.1 Applications of Electrical Insulators304

10.6 Semiconductors.....309

10.6.1 Mechanisms of Semiconduction309

10.6.2 Applications of Ceramic Semiconductors.....311

10.7 Superconductivity312

10.7.1 Mechanism of Superconductivity.....312

10.7.2 Characteristics of Superconductivity313

10.7.3 Evolution of Superconductor Materials314

10.7.4 Structure of High T_c Ceramic Superconductors.....317

10.7.5 Characteristics of the 1:2:3 Ceramic Superconductor317

10.7.6 Applications of Superconductors319

References319

Additional Recommended Reading320

Problems320

Study Guide321

Chapter 11

Dielectric, Magnetic, and Optical Behavior323

11.1 Dielectric Properties323

11.1.1 Polarization324

11.1.2 Dielectric Constant325

11.1.3 Dielectric Strength327

11.1.4 Dielectric Loss329

11.1.5 Capacitance330

11.1.6	Piezoelectricity	334
11.1.7	Pyroelectricity	336
11.1.8	Ferroelectricity	337
11.2	Magnetic Behavior	347
11.2.1	Source of Magnetism	348
11.2.2	Magnetic Terminology	350
11.2.3	Applications of Magnetic Ceramics	353
11.3	Optical Behavior	356
11.3.1	Absorption and Transparency	356
11.3.2	Color	358
11.3.3	Phosphorescence	360
11.3.4	Lasers	360
11.3.5	Index of Refraction	362
11.3.6	Electro-Optics and Integrated Optic Devices	364
	References	365
	Problems	366
	Study Guide	366

Part III

Processing of Ceramics	369
------------------------------	-----

Chapter 12

Powder Processing	371
12.1 Raw Materials	371
12.1.1 Traditional Ceramics.....	371
12.1.2 Modern Ceramics.....	372
12.1.3 Raw Materials Selection Criteria.....	373
12.2 Powder Preparation and Sizing.....	375
12.2.1 Mechanical Sizing	375
12.2.2 Chemical Sizing	386
12.2.3 Miscellaneous Powder Synthesis/Sizing Techniques	393
12.3 Preconsolidation.....	394
12.3.1 Additives	395
12.3.2 Spray Drying.....	395
12.3.3 Granulation	398
12.4 Batch Determination	399
References	400
Additional Recommended Reading	401
Problems	402
Study Guide	402

Chapter 13

Shape-Forming Processes	403
13.1 Pressing.....	403
13.1.1 Steps in Pressing	403
13.1.2 Selection of Additives.....	405
13.1.3 Uniaxial Pressing — Presses and Tooling.....	411
13.1.4 Isostatic Pressing	417
13.1.5 Applications of Pressing	419
13.2 Casting.....	420
13.2.1 Slip Casting	422
13.2.2 Tape Casting.....	441

13.3	Plastic Forming	446
13.3.1	Extrusion	447
13.3.2	Injection Molding	455
13.3.3	Compression Molding.....	468
13.3.4	Roll Forming.....	470
13.3.5	Jigging.....	470
13.4	Green Machining.....	471
	References	472
	Additional Recommended Reading	473
	Problems	474
	Study Guide	475

Chapter 14

	Densification	477
14.1	Theory of Sintering	477
14.1.1	Stages of Sintering	477
14.1.2	Mechanisms of Sintering	479
14.1.3	Control of Conventional Sintering	490
14.1.4	Sintering Problems	494
14.2	Modified Densification Processes	496
14.2.1	Modified Particulate Processes	497
14.2.2	Hot Pressing	498
14.2.3	Hot Isostatic Pressing	504
14.2.4	Chemical Processes	506
14.2.5	Cementitious Bonding	509
14.2.6	Pyrolysis	512
14.2.7	Melt Processing	513
14.2.8	Crystallization	515
14.2.9	Vapor Processing	520
14.2.10	Infiltration	520
14.2.11	Metal-Gas Reaction	523
	References	524
	Additional Recommended Reading	526
	Problems	526
	Study Guide	526

Chapter 15

	Final Machining	529
15.1	Mechanisms of Material Removal	529
15.1.1	Mounted-Abrasive Machining	529
15.1.2	Free-Abrasive Machining	529
15.1.3	Impact Abrasive Machining	530
15.1.4	Chemical Machining	531
15.2	Effects on Strength	533
15.2.1	Effect of Grinding Direction	534
15.2.2	Effects of Microstructure	534
15.2.3	Effects of Grinding Parameters	536
15.2.4	Optimization of Grinding	537
15.3	Additional Sources of Information	543
	References	543
	Additional Recommended Reading	545

Problems545

Study Guide546

Chapter 16

Quality Assurance547

16.1 In-Process QA547

16.2 Specification and Certification548

16.3 Proof Testing550

16.4 Nondestructive Inspection550

 16.4.1 Penetrants550

 16.4.2 X-Ray Radiography551

 16.4.3 Computed Tomography555

 16.4.4 Ultrasonic NDI555

 16.4.5 Other NDI Techniques560

16.5 Quality Problem Solving and Improvement560

 16.5.1 Nature of Variation in a Fabrication Process560

 16.5.2 SPC Tools and Techniques561

 16.5.3 Use of SPC Tools for Continuous Improvement566

 16.5.4 Quality Assurance Perspective of the End User567

Problems569

Study Guide569

Part IV

Design with Ceramics571

Chapter 17

Design Considerations573

17.1 Requirements of the Application573

17.2 Property Limitations574

17.3 Fabrication Limitations576

17.4 Cost Considerations578

17.5 Reliability Requirements578

17.6 Summary.....579

References579

Study Guide579

Chapter 18

Design Approaches581

18.1 Empirical Design581

18.2 Deterministic Design581

18.3 Probabilistic Design583

 18.3.1 Weibull Statistics584

 18.3.2 Use of the Weibull Distribution in Design588

 18.3.3 Advantages of Probabilistic Design590

 18.3.4 Limitations of Probabilistic Design590

18.4 Linear Elastic Fracture Mechanics Approach591

18.5 Combined Approaches592

Study Guide	622

Chapter 20

Toughening of Ceramics	625
20.1 Toughening Mechanisms	625
20.1.1 Modulus Transfer	625
20.1.2 Prestressing	629
20.1.3 Crack Deflection or Impediment	631
20.1.4 Crack Bridging	632
20.1.5 Pullout	633
20.1.6 Crack Shielding	633
20.1.7 Energy Dissipation	635
20.2 Examples of Toughened Ceramics	636
20.2.1 Self-Reinforced Ceramics	636
20.2.2 Transformation-Toughened Ceramics	640
20.2.3 Particulate-Reinforced Ceramics	644
20.2.4 Whisker-Reinforced Ceramics	646
20.2.5 Al_2O_3 Reinforced with SiC Whiskers	647
20.2.6 Si_3N_4 Reinforced with SiC and Si_3N_4 Whiskers	650
20.2.7 MoSi_2 and $\text{MoSi}_2\text{-WSi}_2$ Reinforced with SiC Whiskers	651
20.2.8 Fiber-Reinforced Ceramics	651
20.2.9 Examples of Ceramic Matrix Composites Reinforced with Ceramic Fibers	659
20.2.10 Composites with Surface Compression	673
20.2.11 Fibrous Monolith	673
20.3 Summary	674
