PART 1. SOIL-STRUCTURE INTERACTION

1. TWENTY FIVE YEARS OF BOUNDARY ELEMENTS FOR DYNAMIC SOIL-STRUCTURE INTERACTION

J Dominguez (Seville)

1. Introduction	1
2. Dynamic Stiffness of Foundations	9
2.1. THREE-DIMENSIONAL FOUNDATIONS	13
2.2. STRIP FOUNDATIONS	16
2.3. AXISYMMETRIC FOUNDATIONS	20
2.4. FOUNDATIONS ON SATURATED POROELASTIC SOILS	24
3. Seismic Response of Foundations	28
4. Dynamic Soil-Water-Structure Interaction. Seismic Response of Dams	31
4.1 FLUID-SOLID INTERFACES	34
5. Gravity Dams	35
5.1. DAM ON A RIGID FOUNDATION. EMPTY RESERVOIR	36
5.2. DAM ON A RIGID FOUNDATION. RESERVOIR FULL OF WATER	37
5.3 DAM ON A FLEXIBLE FOUNDATION. EMPTY RESERVOIR	38
5.4. DAM ON A FLEXIBLE FOUNDATION. RESERVOIR FULL OF WATER	39
5.5. BOTTOM SEDIMENT EFFECTS	42

6. Arch Dams	44
6.1. DAM ON A RIGID FOUNDATION. EMPTY RESERVOIR	45
6.2. DAM ON A FLEXIBLE FOUNDATION. EMPTY RESERVOIR	46
6.3. DAM ON A FLEXIBLE FOUNDATION. RESERVOIR FULL OF WATER	49
6.4. TRAVELLING WAVE EFFECTS	51
6.5. POROELASTIC SEDIMENT EFFECTS	56
7. References	57

2. COMPUTATIONAL SOIL-STRUCTURE INTERACTION

D Clouteau (Paris), D Aubry (Paris)

1. Introduction	61
1.1. PHYSICAL MODELS	61
1.2. NUMERICAL MODELS	62
1.3. HETEROGENEITIES IN THE BEM	63
1.4. TIME DOMAIN BEM/ FREQUENCY DOMAIN BEM	64
1.5. STOCHASTIC APPROACH	65
1.6. UNBOUNDED STRUCTURES	65
1.7. GUIDELINES	66
2. Physical and Mathematical Models	66
2.1. GEOMETRY	66
2.2. THE UNKNOWN FIELDS	67
2.3. LOADS	68
2.3.1. <i>Incident Fields</i>	68
2.3.2. <i>Initial Conditions</i>	68
2.3.3. <i>Applied Forces and Traction</i> s	69
2.4. LINEAR EQUATIONS	69
2.4.1. <i>Field Equations</i>	69
2.4.2. <i>Coupling Equations</i>	69
2.5. VARIABILITY ON THE PARAMETERS	70
2.5.1. <i>Stochastic Model of the Soil Parameters</i>	70
2.5.2. <i>Stochastic Model for the Applied Loads</i>	71
2.6. SUMMARY OF MODELLING SECTION	73
2.6.1. <i>Wellposedness and Approximation</i>	74
3. Domain Decomposition	74
3.1. COUPLING FIELDS	74

3.2. LOCAL BOUNDARY VALUE PROBLEMS	74
3.3. VARIATIONAL FORMULATIONS	75
3.4. THE SFSI EQUATION	76
3.5. FEM AND REDUCTION TECHNIQUES	77
3.5.1. <i>Component Mode Synthesis</i>	78
3.5.2. <i>Principal Directions</i>	79
4. Boundary Integral Equations and BEM	80
4.1. REGULARIZED BOUNDARY INTEGRAL EQUATION IN A LAYERED HALF-SPACE	80
4.2. REGULARIZING TENSORS	81
4.3. BOUNDARY ELEMENTS	82
4.4. COUPLING WITH OTHER NUMERICAL TECHNIQUES	83
4.5. FEM-BEM COUPLING INSIDE A VOLUME	84
5. Unbounded Interfaces	87
5.1. GENERAL SPACE-WAVENUMBER TRANSFORM	87
5.2. INVARIANT OPERATORS	89
5.3. DOMAIN DECOMPOSITION ON INVARIANT DOMAINS	89
5.4. BEM ON INVARIANT DOMAINS	90
5.5. NON INVARIANT UNBOUNDED INTERFACES	92
5.5.1. <i>Statistically Homogeneous Random Medium</i>	92
5.5.2. <i>Weakly Perturbed Invariant Domains</i>	92
5.5.3. <i>Truncated Invariant Domain</i>	92
6. Green's Functions of a Layered Half-Space	93
6.1. SOLUTION IN THE SLOWNESS SPACE	94
6.2. FAST INVERSE HANKEL TRANSFORM	95
6.3. SINGULARITIES	95
7. Applications	96
7.1. SOIL-FLUID-STRUCTURE INTERACTION	96
7.2. MODAL REDUCTION FOR SSI	96
7.2.1. <i>Selecting Dynamic Interface Modes</i>	98
7.2.2. <i>Selecting Input Shapes for Static Correction</i>	99
7.3. SSI ON A RANDOM SOIL	100
7.4. SFSI FOR PERIODIC SHEET-PILES	103

7.5. TOPOGRAPHIC SITE EFFECTS USING SSI FRAMEWORK	107
7.6. THE CITY-SITE EFFECT	107
7.6.1. <i>Spectral Ratios</i>	109
7.7. SSI IN BOREHOLE GEOPHYSICS	112
8. Conclusion	112
9. References	114
10. Appendix: Mathematical Results and Formulae	122
10.1. MATHEMATICAL PROPERTIES OF VARIATIONAL BIE	122
10.1.1. <i>Coupling on a Volume</i>	123
10.2. PROPER NORM FOR RESIDUAL FORCES	124
10.3. MATRICES FOR THE REFLECTION- TRANSMISSION SCHEME	124
10.4. HANKEL TRANSFORM	125
10.5. RECONSTRUCTION FORMULAE	125

3. THE SEMI-ANALYTICAL FUNDAMENTAL-SOLUTION- LESS SCALED BOUNDARY FINITE-ELEMENT METHOD TO MODEL UNBOUNDED SOIL

J P Wolf (Lausanne), C Song (Sydney)

1. Introduction	127
2. Objective of Dynamic Soil-Structure Interaction Analysis	129
3. <i>Salient Concept</i>	130
4. Scaled-Boundary-Transformation-Based Derivation	134
4.1. GOVERNING EQUATIONS OF ELASTODYNAMICS	134
4.2. BOUNDARY DISCRETISATION WITH FINITE ELEMENTS	135
4.3. DYNAMIC STIFFNESS MATRIX	136
4.4. HIGH-FREQUENCY ASYMPTOTIC EXPANSION OF DYNAMIC STIFFNESS MATRIX	137
4.5. MATERIAL DAMPING	139
4.6. UNIT-IMPULSE RESPONSE MATRIX	140
5. Mechanically Based Derivation	141
6. Analytic Solution in Frequency Domain	144
7. Numerical Solution in Frequency and Time Domains	147
8. Extensions	148
8.1. INCOMPRESSIBLE ELASTICITY	148

8.2. VARIATION OF MATERIAL PROPERTIES IN RADIAL DIRECTION	149
8.3. REDUCED SET OF BASE FUNCTIONS	150
8.4. TWO-DIMENSIONAL LAYERED UNBOUNDED SOIL	150
8.5. SUBSTRUCTURING	151
9. Numerical Examples	152
9.1. PRISM FOUNDATION EMBEDDED IN HALF-SPACE	152
9.2. SPHERICAL CAVITY IN FULL-SPACE WITH SPHERICAL SYMMETRY	155
9.3. IN-PLANE MOTION OF SEMI-INFINITE WEDGE	159
9.4. IN-PLANE MOTION OF CIRCULAR CAVITY IN FULL PLANE	161
9.5. OUT-OF-PLANE MOTION OF CIRCULAR CAVITY IN FULL PLANE WITH HYSTERETIC DAMPING	162
10. Bounded Medium	165
11. Concluding Remarks	167
12. References	171

4. BEM ANALYSIS OF SSI PROBLEMS IN RANDOM MEDIA

G D Manolis, C Z Karakostas (Thessaloniki)

1. Introduction	175
2. Review of the Literature	179
2.1. RANDOM LOADING	180
2.2. MONTE CARLO SIMULATIONS	180
2.3. RANDOM BOUNDARIES	181
2.4. SOIL MODELLING	181
2.5. FOUNDATIONS	182
2.6. SLOPE STABILITY	183
2.7. CONSOLIDATION	184
2.8. SOIL-STRUCTURE INTERACTION	184
2.9. EARTHQUAKE SOURCE MECHANISM	185
2.10. PROBABILISTIC RESPONSE SPECTRA	187
3. Integral Equation Formulation	187
3.1. THEORETICAL BACKGROUND	187
3.2. FORMAL SOLUTION	188
3.3. CLOSURE APPROXIMATION	190
4. Vibrations in Random Soil Media	191

4.1. PROBLEM STATEMENT	192
4.2. GROUND RANDOMNESS	192
4.3. ANALYTICAL SOLUTION	194
4.4. APPROXIMATE SOLUTION TECHNIQUE	195
4.4.1. <i>BEM Approach with Volume Integrals</i>	195
4.4.2. <i>BEM Approach without Volume Integrals</i>	199
4.4.3. <i>General Comments</i>	201
4.5. STOCHASTIC FIELD SIMULATIONS	201
4.6. NUMERICAL EXAMPLE	203
5. BEM Formulation based on Perturbations	206
5.1. BACKGROUND	207
5.2. FORMULATION	208
5.3. FUNDAMENTAL SOLUTIONS	211
5.4. NUMERICAL EXAMPLES	213
5.4.1. <i>Circular Unlined Tunnel Enveloped by a Pressure Wave</i>	213
5.4.2. <i>Circular Unlined Tunnel in a Half-Plane under Surface Load</i>	216
6. BEM Formulation Based on Polynomial Chaos	216
6.1. BACKGROUND	216
6.2. FORMULATION	217
6.3. RESPONSE STATISTICS	222
6.4. NUMERICAL EXAMPLE	223
7. Conclusions	227
8. References	228

5. SOIL-STRUCTURE INTERACTION IN PRACTICE

C C Spyrakos (Athens)

1. Introduction	235
1.1. BRIEF REVIEW OF LITERATURE ON BUILDING STRUCTURES AND SSI	235
1.2. BRIEF REVIEW OF LITERATURE ON BRIDGES AND SSI	238
2. Seismic Design of Building Structures Including SSI	238
2.1. BRIEF INTRODUCTION	238
2.2. DESIGN PROCEDURE	239
2.3. RESPONSE SPECTRUM ANALYSIS WITH SSI	246
2.4. NUMERICAL EXAMPLE: BUILDING STRUCTURE	247

2.5. CONCLUSIONS	249
3. Seismic Analysis of Bridges Including SSI	251
3.1. BRIEF INTRODUCTION	251
3.2. MODELLING OF THE STRUCTURE AND THE SOIL	251
3.2.1. <i>Modelling Backfill Soil Stiffness</i>	251
3.2.2. <i>Modelling Pile Stiffness</i>	253
3.2.3. <i>Modelling Abutment Stiffness for Linear Iterative Analysis</i>	255
3.3. ITERATIVE ANALYSIS PROCEDURE	257
3.4. MODELLING ABUTMENT STIFFNESS FOR NON-LINEAR ANALYSIS	260
3.5. BRIDGE EXAMPLE	261
3.5.1. <i>Stiffness Computation</i>	264
3.5.2. <i>Parametric Studies</i>	268
3.6. REMARKS AND CONCLUSIONS	269
4. References	270
5. Appendix	272

PART 2. RELATED TOPICS AND APPLICATIONS

6. BEM TECHNIQUES FOR NONLOCAL ELASTICITY

C Polizzotto (Palermo)

1. Introduction	275
2. Nonlocal Elasticity	277
3. Thermodynamic Framework	279
4. Boundary-value Problem	281
5. Hu-Washizu Principle Extended to Nonlocal Elasticity	284
5.1. NONLOCAL HYPERELASTIC MATERIAL	284
5.2. LINEAR LOCAL ELASTICITY WITH CORRECTION STRAIN	285
6. A Boundary/Domain Stationarity Principle	287
7. Symmetric Galerkin BEM Technique	290
8. Nonsymmetric Collocation BEM Technique	293
9. Conclusions	294
10. References	295

7. BEM FOR CRACK DYNAMICS

M H Aliabadi (London)

Abstract	297
1. Introduction	297
2. Time Domain Method (TDM)	299
3. Laplace Transform Method (LTM)	303
4. Dual Reciprocity Method (DRM)	305
5. Cauchy and Hadamard Principal-Value Integrals	307
6. Numerical Examples	308
6.1. A CENTRAL INCLINED CRACK	308
6.2. ELLIPTICAL CRACK	310
7. Conclusions	311
8. References	312

8. SYMMETRIC GALERKIN BOUNDARY ELEMENT ANALYSIS IN THREE-DIMENSIONAL LINEAR-ELASTIC FRACTURE MECHANICS

*A Frangi (Milan), G Maier (Milan), G Novati (Trento),
R Springhetti (Trento)*

Abstract	315
1. Introduction	315
2. Formulation	316
3. Numerical Evaluation of Weakly Singular Integrals	320
3.1. COINCIDENT ELEMENTS	321
3.2. COMMON EDGE	324
3.3. COMMON VERTEX	326
4. Numerical Examples	327
4.1. FRACTURES IN INFINITE DOMAINS	328
4.2. EDGE CRACKED BAR	331
4.3. CIRCULAR EDGE CRACK IN A PLATE	336
4.6. QUARTER ELLIPTIC CORNER CRACK IN A PLATE	339
5. Concluding Remarks	339
6. References	341
Appendices	
7. Surface Rotors	342
8. Transformations and Equivalence of Domains	343
9. Equivalence of $D_2^c(\tilde{\eta}_1, \tilde{\eta}_2, \eta_1, \eta_2)$ and $D_1^c(\eta_1, \tilde{\eta}_2, \tilde{\eta}_1, \eta_2)$	344

9. NUMERICAL SIMULATION OF SEISMIC WAVE SCATTERING AND SITE AMPLIFICATION, WITH APPLICATION TO THE MEXICO CITY VALLEY

*L C Wrobel (London), E Reinoso (Mexico City),
H Power (Nottingham)*

Abstract	345
1. Introduction	345
2. Wave Propagation in a Half-Space	347
2.1. INCIDENT WAVES	349
3. BEM Formulation for SH Waves	351
4. BEM Formulation for P, SV and Rayleigh Waves	355
5. Observed Amplification in the Mexico City Valley	359
6. One-dimensional Response in the Mexico City Valley	364
7. Two-dimensional Modelling Using the BEM	365
8. Conclusions	369
9. References	373
