

# The Haskell School of Expression

LEARNING FUNCTIONAL PROGRAMMING  
THROUGH MULTIMEDIA

PAUL HUDAK

# Contents

<i>Preface</i>	<i>page</i>	xiii
<b>1 Problem Solving, Programming, and Calculation</b>		1
1.1 Computation by Calculation in Haskell		2
1.2 Expressions, Values, and Types		6
1.3 Function Types and Type Signatures		8
1.4 Abstraction, Abstraction, Abstraction		10
1.4.1 Naming		10
1.4.2 Functional Abstraction		12
1.4.3 Data Abstraction		13
1.5 Code Reuse and Modularity		17
1.6 Beware of Programming with Numbers		17
<b>2 A Module of Shapes: Part I</b>		21
2.1 Geometric Shapes		22
2.2 Areas of Shapes		25
2.3 Cleaning Up		34
<b>3 Simple Graphics</b>		35
3.1 Basic Input/Output		36
3.2 Graphics Windows		40
3.3 Drawing Graphics Other Than Text		42
3.4 Some Examples		43
<b>4 Shapes II: Drawing Shapes</b>		48
4.1 Dealing With Different Coordinate Systems		48
4.2 Converting Shapes to Graphics		51
4.3 Some Examples		52
4.4 In Retrospect		54
<b>5 Polymorphic and Higher-Order Functions</b>		56
5.1 Polymorphic Types		56

5.2	Abstraction Over Recursive Definitions	58
5.2.1	Map is Polymorphic	59
5.2.2	Using <i>map</i>	60
5.3	Append	63
5.3.1	The Efficiency and Fixity of Append	64
5.4	Fold	65
5.4.1	Haskell's Folds	67
5.4.2	Why Two Folds?	68
5.5	A Final Example: Reverse	69
5.6	Errors	71
6	<b>Shapes III: Perimeters of Shapes</b>	74
6.1	Perimeters of Shapes	74
7	<b>Trees</b>	81
7.1	A Tree Data Type	81
7.2	Operations on Trees	83
7.3	Arithmetic Expressions	84
8	<b>A Module of Regions</b>	87
8.1	The Region Data Type	87
8.2	The Meaning of Shapes and Regions	91
8.2.1	The Meaning of Shapes	92
8.2.2	The Encoding of the Meaning of Shapes	93
8.2.3	The Meaning of Regions	96
8.2.4	The Encoding of the Meaning of Regions	97
8.3	Algebraic Properties of Regions	99
8.4	In Retrospect	101
9	<b>More About Higher-Order Functions</b>	105
9.1	Currying	105
9.2	Sections	108
9.3	Anonymous Functions	110
9.4	Function Composition	111
10	<b>Drawing Regions</b>	114
10.1	The Picture Data Type	115
10.2	Drawing Pictures	115
10.3	Drawing Regions	116
10.3.1	From Regions to Graphics Regions: First Attempt	117
10.3.2	From Regions to Graphics Regions: Second Attempt	119
10.3.3	Translating Shapes into Graphics Regions	121
10.3.4	Examples	123

10.4	User Interaction	126
10.5	Putting it all Together	127
10.5.1	Examples	128
<b>11</b>	<b>Proof by Induction</b>	<b>131</b>
11.1	Induction and Recursion	131
11.2	Examples of List Induction	132
11.2.1	Proving Function Equivalences	133
11.3	Useful Properties on Lists	137
11.3.1	Function Strictness	137
11.4	Induction on Other Data Types	141
11.4.1	A More Efficient Exponentiation Function	143
<b>12</b>	<b>Qualified Types</b>	<b>147</b>
12.1	Equality	148
12.2	Defining Your Own Type Classes	150
12.3	Inheritance	153
12.4	Haskell's Standard Type Classes	154
12.5	Derived Instances	157
12.6	Reasoning With Type Classes	160
<b>13</b>	<b>A Module of Simple Animations</b>	<b>163</b>
13.1	What is an Animation?	163
13.2	Representing an Animation	165
13.3	An Animator	167
13.4	Fun With Type Classes	172
13.4.1	Rising to the Level of Animations	172
13.4.2	Type Classes to the Rescue	172
13.4.3	Defining New Type Classes for Behaviors	176
13.5	Lifting to the Limit	177
13.6	Time Transformation	179
13.7	A Final Example: A Kaleidoscope Program	180
<b>14</b>	<b>Programming With Streams</b>	<b>187</b>
14.1	Lazy Evaluation	187
14.2	Recursive Streams	190
14.3	Stream Diagrams	193
14.4	Lazy Patterns	195
14.5	Memoization	198
14.6	Inductive Properties of Infinite Lists	201
<b>15</b>	<b>A Module of Reactive Animations</b>	<b>208</b>
15.1	FAL by Example	209

15.1.1	Basic Reactivity	209
15.1.2	Event Choice	210
15.1.3	Recursive Event Processing	211
15.1.4	Events with Data	212
15.1.5	Snapshot	212
15.1.6	Boolean Events	212
15.1.7	Integration	213
15.2	Implementing FAL	214
15.2.1	An Implementation Strategy	215
15.2.2	Incremental Sampling	217
15.2.3	Final Refinements	219
15.2.4	Representing Events	220
15.3	The Implementation	220
15.3.1	Behaviors	221
15.3.2	Events	225
15.3.3	An Example	228
15.4	Extensions	229
15.4.1	Variations on <i>switch</i>	231
15.4.2	Mouse Motion	232
15.5	Paddleball in Twenty Lines	233
16	<b>Communicating With the Outside World</b>	236
16.1	Files, Channels, and Handles	236
16.1.1	Why Use Handles?	238
16.1.2	Channels	238
16.2	Exception Handling	239
16.3	First-Class Channels and Concurrency	242
17	<b>Rendering Reactive Animations</b>	245
17.1	Preliminaries	245
17.2	Reactimate	246
17.3	Window User	247
18	<b>Higher-Order Types</b>	249
18.1	The Functor Class	249
18.2	The Monad Class	251
18.2.1	Other Instances of Monad	255
18.2.2	Other Monadic Operations	259
18.3	The MonadPlus Class	259
18.4	State Monads	261
18.5	Type Class Type Errors	263

<b>19</b>	<b>An Imperative Robot Language</b>	265
19.1	IRL by Example	266
19.2	Robot is a State Monad	270
19.3	The Implementation of IRL Commands	272
19.3.1	Robot Orientation	273
19.3.2	Using the Pen	274
19.3.3	Playing With Coins	274
19.3.4	Logic and Control	274
19.4	All the World is a Grid	276
19.5	Robot Graphics	281
19.6	Putting it all Together	282
<b>20</b>	<b>Functional Music Composition</b>	287
20.1	The Music Data Type	288
20.2	Higher-Level Constructions	293
20.2.1	Lines and Chords	293
20.2.2	Delay and Repeat	293
20.2.3	Polyrhythms	294
20.2.4	Determining Duration	295
20.2.5	Reversing Musical Structure	295
20.2.6	Truncating Parallel Composition	296
20.2.7	Trills	297
20.2.8	Percussion	298
20.3	A Couple of Final Examples	300
20.3.1	Cascades	300
20.3.2	Self-Similar (Fractal) Music	301
<b>21</b>	<b>Interpreting Functional Music</b>	304
21.1	Interpreting Music: A <i>Performance</i>	305
21.2	An Algebra of Music	308
<b>22</b>	<b>From Performance to MIDI</b>	313
22.1	An Introduction to MIDI	313
22.2	The Conversion Process	314
22.3	Putting It All Together	319
<b>23</b>	<b>A Tour of the PreludeList Module</b>	321
23.1	The PreludeList Module	321
23.2	Simple List Selector Functions	322
23.3	Index-Based Selector Functions	323
23.4	Predicate-Based Selector Functions	324
23.5	Fold-like Functions	325
23.6	List Generators	327

23.7	String-Based Functions	327
23.8	Boolean List Functions	328
23.9	List Membership Functions	329
23.10	Arithmetic on Lists	329
23.11	List Combining Functions	330
<b>24</b>	<b>A Tour of Haskell's Standard Type Classes</b>	332
24.1	The Ordered Class	332
24.2	The Enumeration Class	333
24.3	The Bounded Class	334
24.4	The Show Class	334
24.5	The Read Class	338
24.6	The Index Class	341
24.7	The Numeric Classes	343
<b>A</b>	<b>Built-in Types Are Not Special</b>	345
<b>B</b>	<b>Pattern-Matching Details</b>	348
<i>Bibliography</i>		353
<i>Index</i>		357
